SCRIPT FOR FACT CHECK

From Fund to Token

How a regulated fund is tokenised on Redbelly through Tokeniser

Example asset	An Australian wholesale managed fund (unit trust). Illustrative example, not a real fund.
Audience	People with no crypto background
Runtime	88.2 seconds
Video	16:9, 1920 x 1080, 30 fps, H.264 MP4. Subtitles burned in, plus SRT and VTT files.
Voiceover	202 words, 19 lines
Sources read	26 October 2026, from the resources supplied with the brief
Version	1.0

Story

One Australian wholesale fund, shown as an illustrative example, moves from a traditional unit register to compliant tokens on Redbelly Network, issued through Tokeniser. The film walks through the five steps Tokeniser documents in its own Knowledge Hub: legal review, setting the rules, verifying investors, issuing on Redbelly, and checked transfers. It closes on the idea that the fund, its strategy and its licence stay the same, while the infrastructure underneath changes.

Script

Timecodes are scene start and end in the final video. Every voiceover line also appears as a caption, word for word.

SCENE	TIME	VOICEOVER	ON SCREEN TEXT	VISUAL	SOURCES
1. The fund	0:00.0 to 0:07.3	This is a wholesale fund in Australia. Its investors hold units on a register. How does it become a token on Redbelly?	How does it become a token on Redbelly? Wholesale fund · Australia Unit trust Investors hold units Investor A · Investor B Investor C · Investor D Unit register · Investor Units	A fund card: Wholesale fund, Australia, Unit trust. Lines run to four investors, each holding grey unit blocks. A unit register lists each holding. The question appears above: How does it become a token on Redbelly?	KH-FUND TK-HOME
2. Today	0:07.3 to 0:12.9	Today, registers sit across separate systems, checks are manual, and settlement takes days.	Today · Registry Spreadsheets · Emails Manual checks Settlement: two business days or longer	Three separate cards, Registry, Spreadsheets and Emails, drift apart with broken links between them. A Manual checks card appears, then a settlement bar that fills slowly: Settlement: two business days or longer.	TK-RTT TK-AC TK-IS

3. Step 1: Legal review	0:12.9 to 0:23.3	Step one. A legal review confirms the trust deed allows ownership on chain. The manager's existing licence covers it. There is no separate tokenisation licence.	Trust deed On-chain ownership records permitted Existing AFSL covers it Covers issuance of tokenised fund interests No separate tokenisation licence	Step tracker, step 1 active. A trust deed is scanned and one clause turns mint: On-chain ownership records permitted. A licence card: Existing AFSL covers it. A card marked with a cross: No separate tokenisation licence.	KH-FUND
4. Step 2: Set the rules	0:23.3 to 0:32.7	Step two. On Tokeniser, the manager sets the rules: who can invest, foreign ownership limits, lock-up periods. They are written into the token itself.	Tokeniser Fund setup Compliance rules Investor eligibility Wholesale Foreign ownership limit Lock-up period Rules written into the token	A Tokeniser style Fund setup panel. Three compliance rules switch on as they are named: Investor eligibility (Wholesale), Foreign ownership limit, Lock-up period. The rules fly into a token: Rules written into the token.	KH-FUND KH-COMP KH-WORK
5. Step 3: Verify investors	0:32.7 to 0:42.7	Step three. Each investor is verified: identity, anti-money laundering screening, investor classification. Until then, no tokens can reach their wallet.	Investor Digital onboarding Identity AML screening Investor classification Wholesale Wallet 0x7a3f…c21e 0x91be…04d7 Not verified Wallet verified Blocked	An investor card ticks Identity, AML screening and Investor classification (Wholesale) as they are named. Their wallet changes to Wallet verified and a token arrives. A second, unverified wallet appears: a token stops at its lock, marked Blocked.	KH-COMP

SCENE	TIME	VOICEOVER	ON SCREEN TEXT	VISUAL	SOURCES
6. Step 4: Issue on Redbelly	0:42.7 to 0:51.0	Step four. Tokens for their units are issued on Redbelly Network, into verified wallets. The register is live from the first token.	Tokeniser · Issue tokens · Redbelly Network · 0x7a3f…c21e · 0x3c58…9a10 · 0x5d2e…b7f4 · Verified · Unit register · Live · Wallet · Units	The manager presses Issue tokens in Tokeniser. Three tokens pass through the Redbelly Network layer into three verified wallets. The unit register fills row by row and shows a Live status.	KH-WORK
7. Step 5: Transfers	0:51.0 to 0:59.8	Step five. Every transfer is checked against those rules first. Break a rule, and it is rejected. Pass, and it settles in seconds.	Investor A · Investor B · Investor C · 0x7a3f…c21e · 0x91be…04d7 · 0x3c58…9a10 · Verified · Rule check · Eligibility · Ownership limit · Lock-up · Not eligible · Rejected: not eligible · Settled in seconds · Register updated	Investor A sends a token to a Rule check gate that tests eligibility, ownership limit and lock-up. A transfer towards Investor B, who is not eligible, is rejected and the token returns. A transfer to Investor C passes, shows Settled in seconds, and Register updated. 8. The Redbelly layer	0:59.8 to 1:17.9	Underneath is Redbelly Network, Australia's public digital token infrastructure. Every participant's identity is verified at protocol level, and confirmed transactions cannot be reversed. Its consensus is formally verified. And Australia's central bank chose Redbelly for Project Acacia.	Redbelly Network · Tokeniser · Issue · Settle · Public digital token infrastructure · Identity verified at protocol level · Confirmed transactions cannot be reversed · Formally verified consensus · Born from University of Sydney and CSIRO research · Chosen by Australia's central bank for Project Acacia	The background turns Redbelly navy and the official Redbelly logo appears. A Tokeniser layer (Issue) sits on a Redbelly Network layer (Settle) drawn as a network of nodes. Six fact cards appear as each fact is spoken.	TK-HOME · TK-TECH · TK-GS · RB-AT · TK-WHY
9. Close	1:17.9 to 1:28.2	Same fund. Same strategy. Same licence. Now its units are compliant tokens on Redbelly, through Tokeniser.	Same fund. · Same strategy. · Same licence. · Wholesale fund · Australia · Unit trust · Investor A · Investor B · Investor C · Investor D · Compliant tokens on Redbelly · Tokeniser · tokeniser.com · Built on · Redbelly Network · Illustrative example. General information only, and not financial or legal advice.	Same fund. Same strategy. Same licence. appear word by word. The fund card returns and each investor's grey unit blocks turn into mint tokens: Compliant tokens on Redbelly. End card: Tokeniser, tokeniser.com, Built on Redbelly Network with the official logo, and a general information line.	TK-FUNDS · KH-FUND · TK-HOME · KH-WORK

Also on screen: A tag in the top left corner marks the example as illustrative. A five step tracker runs across the top during steps one to five. Text: Illustrative example, Legal review, Set the rules, Verify investors, Issue on Redbelly, Transfers.

Fact check: voiceover

Each line, with the exact wording on the supplied page that supports it.

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE
L01	0:00.5	This is a wholesale fund in Australia. Its investors hold units on a register.	The process applies broadly across managed investment schemes, unit trusts, unlisted companies, and special purpose vehicles KH-FUND Wholesale and retail structures carry different disclosure and compliance obligations. KH-FUND	Describes the illustrative asset. Not a claim about Redbelly or Tokeniser.
L02	0:05.2	How does it become a token on Redbelly?	Tokeniser operates on Redbelly Network, Australia's public digital token infrastructure, with identity and eligibility built into the protocol. TK-HOME	
L03	0:07.8	Today, registers sit across separate systems, checks are manual, and settlement takes days.	Most fund registers are updated after the fact, across several systems that require manual reconciliation. TK-RTT Investor eligibility, holder limits and transfer restrictions are typically managed through spreadsheets, emails and manual sign-offs. TK-AC Every subscription, redemption and transfer remains unsettled for two business days in listed funds, and often longer in private assets. TK-IS	"Settlement takes days" summarises two business days in listed funds and often longer in private assets.

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE
L04	0:13.5	Step one. A legal review confirms the trust deed allows ownership on chain.	The first step in tokenising a fund in Australia is a legal review of the fund's constitutional documents, the trust deed, constitution, or shareholder agreement, to confirm that they permit on-chain ownership records and electronic transfer of interests. KH-FUND	
L05	0:18.3	The manager's existing licence covers it. There is no separate tokenisation licence.	There is no separate tokenisation licence required in Australia. The fund manager's existing AFSL (or their reliance on an AFSL holder) covers the issuance of tokenised fund interests in the same way it covers traditional interests. KH-FUND	
L06	0:23.8	Step two. On Tokeniser, the manager sets the rules: who can invest, foreign ownership limits, lock-up periods.	the compliance rules to be encoded (investor eligibility, transfer restrictions, foreign ownership limits) KH-FUND Foreign ownership limits, lock-up periods, and wholesale investor thresholds are all configurable compliance parameters. KH-COMP	
L07	0:30.7	They are written into the token itself.	The compliance parameters configured at this stage are encoded into the token's smart contract. KH-WORK	
L08	0:33.2	Step three. Each investor is verified: identity, anti-money laundering screening, investor classification.	This covers identity document verification, liveness checking, AML screening against sanctions and politically exposed person lists, and investor classification under the Corporations Act KH-COMP	

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE
L09	0:40.1	Until then, no tokens can reach their wallet.	Until this process is complete and the investor's wallet is verified, tokens cannot be issued to or transferred into that wallet. KH-COMP	
L10	0:43.2	Step four. Tokens for their units are issued on Redbelly Network, into verified wallets.	Tokeniser works by representing ownership interests in regulated financial assets as digital tokens on Redbelly Network KH-WORK Tokens are minted on Redbelly Network and transferred to the verified investor wallets. KH-WORK	
L11	0:48.7	The register is live from the first token.	The cap table is live from the first token issued. KH-WORK	
L12	0:51.6	Step five. Every transfer is checked against those rules first.	Every transfer is checked against configured compliance parameters before submission. KH-WORK Every holder is verified and every transfer checked against the asset's rules, automatically. TK-HOME	

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE
L13	0:55.1	Break a rule, and it is rejected.	A transfer to an unverified wallet, an ineligible investor, or in breach of a transfer restriction is rejected before processing. KH-WORK Trades that fail a check do not proceed, and every check is logged. TK-AC	
L14	0:57.1	Pass, and it settles in seconds.	Compliant transfers settle atomically on Redbelly Network in seconds. KH-WORK On Tokeniser, cash and units are exchanged in a single step and the register updates simultaneously, or the transaction does not proceed. TK-IS	The Knowledge Hub also notes that with placeholder and omnibus wallets, payment and issuance follow their traditional sequence. The line follows the Knowledge Hub's own step 4 wording.
L15	1:00.3	Underneath is Redbelly Network, Australia's public digital token infrastructure.	Tokeniser operates on Redbelly Network, Australia's public digital token infrastructure, with identity and eligibility built into the protocol. TK-HOME Underneath it runs Redbelly Network, Australia's public digital token infrastructure: proven settlement, verified security, and eligibility built into the protocol. TK-TECH	

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE
L16	1:05.3	Every participant's identity is verified at protocol level, and confirmed transactions cannot be reversed.	Redbelly is a public digital token infrastructure where every participant's identity is verified at the protocol level, so an open network still meets the accountability the sector requires. TK-GS Deterministic finality ensures transactions are confirmed once and cannot be reversed, providing certainty for financial markets RB-AT	
L17	1:11.8	Its consensus is formally verified. And Australia's central bank chose Redbelly for Project Acacia.	Formally verified consensus eliminates forks and rollbacks, ensuring consistent and reliable execution RB-AT Redbelly's consensus is proven correct by model checking, which exhaustively checks every reachable state of the protocol. TK-TECH Built on Redbelly, Australia's public digital token infrastructure and the network chosen by Australia's central bank for its digital currency project. TK-GS Redbelly Network was the public permissioned chain selected to underpin Project Acacia. TK-WHY	Combines two Tokeniser statements: Redbelly is the network chosen by Australia's central bank for its digital currency project, and it was selected to underpin Project Acacia.

LINE	TIME	LINE AS SPOKEN	SUPPORTING TEXT, VERBATIM	NOTE

L18	1:18.4	Same fund. Same strategy. Same licence.	Two funds can hold the same underlying assets, follow the same investment strategy and generate the same investment return. The difference is what the infrastructure around the fund allows the manager and investors to do.
			`TK-FUNDS`
			
			There is no separate tokenisation licence required in Australia. The fund manager's existing AFSL (or their reliance on an AFSL holder) covers the issuance of tokenised fund interests in the same way it covers traditional interests.
			`KH-FUND`	

L19	1:21.1	Now its units are compliant tokens on Redbelly, through Tokeniser.	Tokeniser Pty. Ltd. is an Australian company providing compliant asset tokenisation and management solutions.
			`TK-HOME`
			
			Tokeniser works by representing ownership interests in regulated financial assets as digital tokens on Redbelly Network
			`KH-WORK`

Left out on purpose

These appear in the resources but stay out of the film, to avoid price talk, return language or figures that differ between pages.

- Market size projections, AUM, fee and cost saving figures
- Transactions per second (the Tokeniser technology page and the Redbelly home page show different figures)
- Liquidity as a benefit (Tokeniser states tokenisation does not guarantee liquidity)
- Lower cost of capital, leverage and lending claims
